

What the parents learned from the 10-year old students has been explained in various chapters of *How to Create a Perfect School* except for their calculation of mean, median, mode and range. This calculation is not a typical aspect of the LtoJ® process. However, instead of teaching these statistical concepts with a chapter in a book Codi Hrouda chose to basically eliminate the chapter and have the students learn and practice these basic statistical tools all year long.

Her experience matches the research referenced in chapter 26 labeled as Massed vs. Spaced-Out Assessment.
